

OMC-121 Hand Anemometer

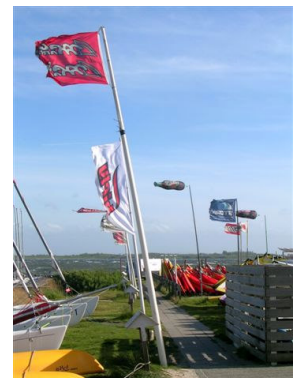

The OMC-121 is a compact, portable hand anemometer which gives a direct reading of wind speed in four different scales simultaneously. Power supply or batteries are not necessary for this sensor. A vertical spindle carrying three small plastic cups of 35mm diameter rotates on ball bearings at a rate proportional to wind speed. The anemometer has a handle and two curved feet to prevent damage to the cups when it is laid down.

Features

- Range 0..12 Beaufort
- Scaling in km/h and Beaufort
- Robust light weight measuring device
- Including protection cover
- Optional maximum wind speed indicator
- Weight 350 gr.

For sailplane use

For water sport use
